| <b>eUp</b><br>AI Engineer                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Hanoi, Vietnam<br>11/2024 - Present |
| <ul style="list-style-type: none"><li>◦ <b>Todaii Japanese</b>: Fine-tuned GPT-4 with supervised fine-tuning (SFT) to rewrite NHK articles by JLPT level; built prompt workflows and evaluation loops with the OpenAI API. Rating quality from 1,000+ users feedbacks showed a 80% improvement in readability and comprehension for JLPT N5-N3 levels.</li><li>◦ <b>Mazii Dictionary</b>: Built a personalized Japanese dictionary lookup using a summarized user-profile cache (distilled from session-history summarization) injected at query time via a LangGraph state machine over GPT-4 — bounding per-request context cost as history grows; 12,000+ active users, 4.2/5 satisfaction.</li><li>◦ <b>Mazii Speech</b>: Built real-time Japanese TTS and anime-style voice cloning with Rectified Flow Diffusion Transformer (RF-DiT), VITS, HuBERT, and RMVPE; Optimized inference with INT8 quantization, ONNX and LRU caching.</li><li>◦ <b>Mazii Foundation Model</b>: Post-training (DFT) Gemma 4 MoE to Japanese foundation model for vocabulary, kanji, grammar, and general knowledge base. Optimized inference with 4-bit quantization (NVFP4). Optimized serving with KV-cache utilization, Radix Attention, and Continuous Batching. Implemented for internal Japanese editors/collaborators with 4.8/5 satisfaction rating.</li><li>◦ <b>Hanzii</b>: Built personalized AI characters for Chinese learners; Applied Post-training (Online-DPO with Claude-Opus-4.6) in GLM-4. Optimized inference with 8-bit quantization (FP8). Deploy to production using LangChain, and LangGraph. Current active users: 1,000+ with a 4.7/5 average satisfaction rating.</li></ul> |                                     |

## TECHNICAL SKILLS

- **Programming**: Python, C++
- **ML / DL**: Model Training - Evaluation - Compression, Deep Reinforcement Learning, Transformers-based, Encoder-Decoder models, Causal Language Modeling
- **AI Agents**: Prompt Engineering, RAG, LangChain, LangGraph, OpenAI API
- **AI Frameworks**: Hugging Face, PyTorch, TensorFlow, TensorFlow Lite
- **AI Inference / Optimization**: ONNX, OpenVINO, SGLang, vLLM, TensorRT-LLM, KV-cache optimization, Continuous Batching, Flash Attention, Speculative Decoding
- **Backend / Tools**: Docker, Flask API, FastAPI, Git, GitLab

## ADDITIONAL

- **Award**: Best Presentation Award, Summer School 2023 on Modern Machine Learning: "Foundations and Applications" (BKAI, NAVER, VinBigData)
- **Languages**: English (TOEIC 885)
